Impact Analysis of International Aid in Cambodia through Web GIS

Kaytlin Colburn + Fang Ren, Ph.D.
MS GIS Program + University of Redlands

Background
The Trailblazer Foundation is a non-profit organization that helps villagers in rural Cambodia gain access to clean water by installing bio-sand water filters.

Challenge
To continue its mission, The Trailblazer Foundation needed a way to increase and diversify its donations, measure its impact in the communities it serves, and share that information with stakeholders.

Solution
Web GIS gives Trailblazer staff the ability to interact with its data in a new way. They can share information with current and potential donors via web maps. Donors can see the impact of their generous support, and The Trailblazer Foundation can continue its important work of providing clean water and a healthy life to rural Cambodians.
